SUMMARY

- Data-driven graduate with experience in data analysis, statistical modelling, and business intelligence using tools like SQL, Python and Power BI.
- Currently completing a Postgraduate Diploma in Data Science with hands on exposure to machine learning, predictive modelling, data preparation, and data visualization.
- Seeking an entry-level Data Scientist, Data Analyst, or Graduate Programme role where I can contribute to data-driven decision-making while expanding my skills in machine learning, analytics, and data engineering.

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks & Libraries: NumPy, Pandas, Scikit-learn

Databases: MySQL, Microsoft SQL Server

Data Visualization: Power BI, Matplotlib

Tools & Platforms: GitHub, Azure, VS Code, Jupyter Notebooks, Google Colab

Soft Skills: Analytical Thinking, Problem Solving, Communication, Time Management, Attention to Detail

PROJECTS

Diabetes Patient Readmission Analysis

Tech Stack: Python, Pandas, NumPy, Matplotlib, Google Colab

- Cleaned and transformed healthcare data containing 100,000+ patient records to improve data quality and analytical usability.
- Engineered features and standardized categorical variables to support patient readmission analysis.
- Performed exploratory data analysis to identify factors associated with hospital readmissions, including demographics, admission types, medication usage, and length of stay.
- Built statistical and visual summaries using Pandas and Matplotlib to communicate key healthcare trends.
- Created heatmaps, distribution analyses, and comparative visualizations to investigate relationships between patient characteristics and readmission outcomes.
- Delivered insights through a structured analytical workflow, demonstrating data cleaning, feature engineering, visualization, and reporting capabilities.

EDUCATION

Post-Graduate Diploma in Data Science - Stadio Higher Education

March 2026 – November 2026

- Relevant Modules: Working with Data, Introduction to Data Science and Statistics, Data Science 1 and Data Science 2, Financial Modelling, Capstone Project

Bachelor Of Business Science (Economics and Econometrics) - Monash University

March 2018 – August 2022

- Relevant Modules: Business statistics, Business Data Modelling, Advanced Quantitative Methods for Business, Applied Econometrics, Corporate Finance

CERTIFICATIONS & CONTINUOUS LEARNING

Microsoft Power BI (PL-300)
Microsoft Data Engineering (DP-700)
